

NUTRIVIT 50

EC FERTILIZER

Mineral fertilizer for microelements supply
Fertilizer containing only one microelement:
Copper as copper oxychloride
Allowed in organic farming

Composition

Copper total (Cu) water soluble	50%
---------------------------------	-----

Characteristics

Aspect	Fine powder
Density at 20 °C	750-900 g/l
pH	5,5 – 6,5
Color	The product is available in two colors: Light green or blue.

NUTRIVIT 50 is a fertilizer based on copper microelement. It mainly carries out a catalytic function which is crucial for vegetal metabolism.
NUTRIVIT 50 enables regular metabolic activity of the plant, as copper is a basic component of many enzymes and is important for chlorophyll synthesis.
NUTRIVIT 50 reduces copper deficiencies because it makes copper easily available for the plant. In fact copper is usually difficult to absorb from the soil where is kept, especially from soils rich in organic substances or with alkaline response.
NUTRIVIT 50 is suitable for foliar application.

• Rate and method of application - FOLIAR APPLICATION

Crop	Rate kg/ha
Fruits, Wine, Olive	1,4-1,8
Vegetables and Strawberry	1,8-2,2
Sugarbeet, Cereals, Tobacco	1-1,4

Recommendations and compatibility: Keep at a temperature ranging from 4°C to 25°C. Use only in case of actual need. Do not exceed recommended quantities. The product is stable at ordinary temperature and pressure. Avoid mixing with alkaline reaction products. Check compatibility from time to time.
