Petro 8-5-15 S

PRODUCT

Petro 8-5-15 S is an organo-mineral fertilizer which is created from the processing of premium raw materials, carefully selected to determine a programmed release of the nutrients. These are, in fact, characterized by different net rates of mineralization. The mineral raw materials, particularly the potassium salts, are characterized by total solubility and by a low chlorine content as they are made in the form of sulfate. Furthermore, Petro 8-5-15 S is enhanced by the presence of *RyZea*, an exclusive technology that enriches the product with phytostimulating molecules which improve root development, the amount of nutrients absorbed and productivity of the crops.
