Rycyneem Green Plus

PRODUCT

Rycyneem Green Plus is a basal organic fertilizer enriched with plant cakes of Brassicaceae and with the exclusive production technology *Microzym Trio*. In fact, Rycyneem Green provides a selected microbial consortium containing heat resistant microorganisms: *Thermoactinomyces spp.*, *Streptomyces spp.* and *Bacillus spp.*, capable of enzymatically affecting the premium raw materials of plant origin present in the product, the degradation of which produces compounds that restore soil fertility and habitability. The presence of calcium sulphate helps to improve the chemical and physical properties of the soil. The final result is one of the most effective actions against exhaustion of the soil.

COMPOSITION

Total Nitrogen (N)	3,0 %	Sulphur trioxide (SO ₃) soluble in water	12,0 %
Organic Nitrogen (N)	3,0 %	Organic Carbon (C)	19,0 %
Total Phosphorus pentoxide (P ₂ O ₅)	3,0 %	Organic substance	38,0 %
Total Calcium oxide (CaO)	13,0 %		

Components: protein hydrolysates with variable mineralization, humified mixture of manure (cattle and chicken manure), plant cakes, calcium sulfate (gypsum), preparations of microorganisms allowed by Reg. EC 889/2008.

DOSES AND ADMINISTRATION

Crops	Soil application	Dose kg/ha
Fruit trees	Before planting on the entire surface	2000-2500
Horticultural crops in greenhouse	Before sowing/transplantation on refined and dry soil	2000-3000
Horticultural crops in full field	Before sowing/transplantation on refined and dry soil	2000-2500

Rycyneem Green Plus carries out its activity best when applied prior to soil solarization, on refined and dry soils. After distribution, bury the product and water abundantly in order to activate the fertilizer. Cover the land with plastic film and proceed to normal solarization practice. The presence of plastic film extends the action of the volatile molecules released by Rycyneem Green Plus.

Aforementioned doses are indicative and may vary in relation to the pedo-climatic characteristics of each zone.

WARNINGS

The product must be buried, avoiding direct contact with the fertilized plants. Store in cool, dry place and keep away from excessive heat. For the best use of this product, consult the fertilization plans.

FORMULATION

Pellet/powder

PELLET DIAMETER

3,5 mm

HUMIDITY
